Consultation with teachers working in Vocational Education

Inside the project, iTStudy Hungary organised a consultation for teachers working in the Hungarian vocational education.

Place and date of the Event: Budapest Műszaki Szakképzési Centrum Neumann János Számítástechnikai Szakközépiskolája, 16th November 2015.

Aim of the Consultation

European Union considers using the EQAVET standard as a key issue for Member States' vocational training institutes.

The aim of this consultation is to discuss the actual national situation with the teachers working in vocational education. In the consultation participated schoolmasters, educators and quality assurance specialists. We have talked about the relationship of vocational schools and QA:

- What kind of quality assurance they had in the past
- What part of legal systems influences the schools QA-system
- What kind of quality management systems is conceivable in the schools
- Which functions of QA are relevant for the school
- Most important: what they think about the usefulness of quality management and which indicators are believed to be the best

Regarding the consultation we met with new aspects and our conceptions was transformed. We discussed about our knowledge of school management system and compared EQAVET indicators with Hungarian national requirements. At the end of consultation we tried to work out a common opinion, and after summarizing the domestic demands how to give assignment to the system developers of OpenQAsS project.

The specialist teachers, school directors and quality managers were attend almost equally on the consultation.

Apart from some exceptions, all members have already participated in quality management process.

Although the participants were satisfied with the preparedness of the performers, but only 3 respondents of 11 felt that they received answer to their arising questions.

The reason of this that we would like to start a process with the consultation where we can define the requirements for the planned quality management software together.

The result of the consultation will be the software, but the planning process need more time.

This could be the reason that they felt that they didn't get answer for their questions.

Arising questions were useful, because 7 responders of 11 said, that a good quality management can be created by the answers.
